ALBUQUERQUE, NM — A-Tech Corporation (*d.b.a.* Applied Technology Associates) has been awarded a \$34,905,249 cost-plus-fixed-fee contract for the Surveillance, Intelligence, and Reconnaissance Enhanced Network (SIREN) program. The objective of SIREN is to provide an autonomous, multi-modal, space-based sensing capabilities for persistent tactical intelligence, surveillance, and reconnaissance. Work will be performed in Albuquerque, New Mexico, and is expected to be completed December 4, 2025. This award is the result of a competitive acquisition and one offer was received. Air Force Research Laboratory, Kirtland Air Force Base, New Mexico, is the contracting activity (FA9453-20-C-0023).

“ATA looks forward to implementing our innovative approach to enable our proposed tactical ISR capability.” said Johnathan Jones, ATA’s Director of Defense and Technology Services. “We are confident our development efforts will help to enhance the mission execution of the tactical edge user.”

ATA's Technical Services Campaign (TSC) will carry out the SIREN contract. ATA TSC is focused on leveraging our technology know-how to be a leading provider of high-end engineering services at customer-sites in Space Systems Technologies, Directed Energy (DE) Technologies, Operational Test and Evaluation (OT&E) Support, and related operations.

ATA is an advanced technology and engineering services company specializing in solutions and services for laser communications, acquisition, tracking, and pointing, small satellites, and space situational awareness applications.
